

RectalPro™

Prostate Endorectal Balloon (ERB)

Advanced Technology - Prostate ERB

Proton Therapy - IMRT/SBRT

Brachytherapy - Prostate Beds

RectalPro™

Prostate Endorectal Balloon (ERB)

Insert the ERB tip towards the table/couch and follow the anatomical curve of the colon

ERB inserted

Slowly inflate with air/water 60-100cc with physician's directions

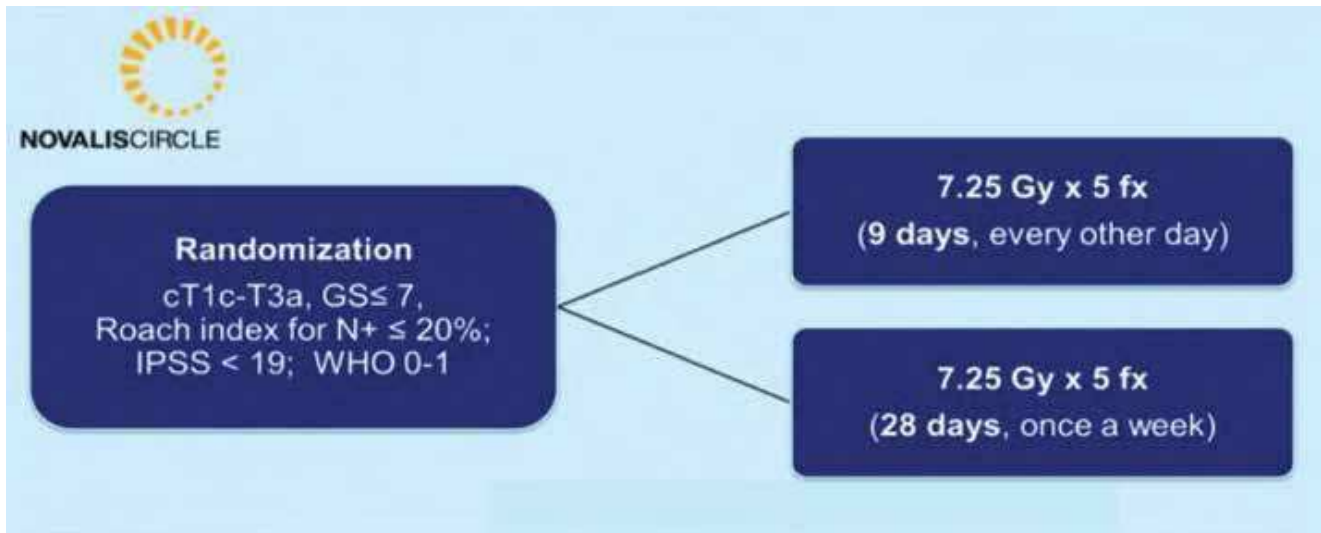

After inflation, pull down the ERB and affix the stopper

SBRT FOR PROSTATE CANCER A RANDOMIZED PHASE II TRIAL

Thomas ZILLI, MD

Prof. Raymond MIRALBELL, MD

ESTRO meeting 2017 Vienna

- 170 randomized patients (2012-2015)
- Complete recovery to the GI baseline status at the 12 week follow-up
- 12-weeks results demonstrate for both study arms the feasibility, tolerance, and good acute toxicity of an SBRT

RectalPro™ Prostate Endorectal Balloon (ERB)

Reduces ano-rectal
toxicity¹

Increases Gland
stability²

Improved daily
reproducibility³

Sparing effect of rectal
walls and sphincter^{4,5}

Reduces Intrafraction
prostate motion⁶

Features of the QLRAD ERB

- Curved shaft designed to promote patient comfort
- Reproducible balloon positioning
- Air/water fill volume able to be varied according to clinician preferences

Potential Benefits of Endo-Rectal Balloons During IMRT for Localized Prostate Cancer

- Limit prostate intra-fraction motion during IMRT⁷
- Decrease anal and rectal late toxicity⁸
- Distends rectum, so lower percent of rectum treated⁹
- Reduces objective rectal mucosal telangectasias¹⁰
- Limits prostate movement while “beam on”¹¹
